

Abstract

TRINITY SERIES, HANDS-FREE KIT, MODEL K1000PI

The Trinity Series, so-called for it's 3-in-1 functionality, is unique and inspired for several reasons.

1. At the time of initial production, it is the only product in existence that controls both the two-way radio (simplex) and cellular (duplex) functions of the iDEN phone system.
2. Single-wire configuration, integrating the earpiece, microphone, PTT (push-to-talk) button, and connector, all in an elegant, efficient device.
3. A highly-machined product that is affordable to the consumer, and efficient in it's functionality. Enrolls a "push-to-talk" circuit for the two-way radio feature on the Nextel phone system, and controls the answering and ending of calls for all cellular (duplex) functions.
4. Born of demand, and is totally unique. So much so, that Nextel OEM will soon include it in their line of products.

Thank you for your time, and consideration.
